Schneller Launches AerTrim™ BD100 Decorative Laminate To Replace Fabrics

Kent, Ohio, USA – Schneller Inc., has introduced a tough new laminate that exhibits the rich look, color and texture of fabrics, but offers the superior durability and easy application of a laminate.

AerTrim BD100 is a heavy-duty reinforced laminate engineered for extreme high wear and damage-prone areas in airline cabins such as bulkheads, class dividers, partitions and dado areas. Available with Schneller's heat-activated or pressure sensitive adhesives, or applied with contact adhesive, AerTrim BD100 adheres to all aircraft substrates.

AerTrim BD100 offers a broad spectrum of aesthetic effects to suit any interior decor, with unlimited colors, patterns and authentic fabric-like textures – but eliminates the limitations of fabric such as fraying fibers, fading, staining, hard to clean surfaces.

AerTrim BD100 complies with low smoke and heat release requirements, qualifying it for use on all aircraft fleets.

Schneller is a global leader in the development and production of engineered decorative laminates and non-textile flooring for the transportation and architectural industries. Schneller provides custom design and color matching, material selection, continuous roll and sheet production from its ISO-9001 certified production facilities in Kent, Ohio and Pinellas Park, Florida with global sales and service support from its Paris, France facility.

AerTrim BD100 replaces fabric on the Delta 757 class divider.
