New Brochure From Schneller Introduces AerFilm™ CG Continuous Roll Laminate

Kent, Ohio, USA – Schneller Inc., has released a new brochure that introduces AerFilm CG, a new continuous roll laminate that enables the application of precise geometric print designs up to 60 inches wide at lower cost than press sheets.

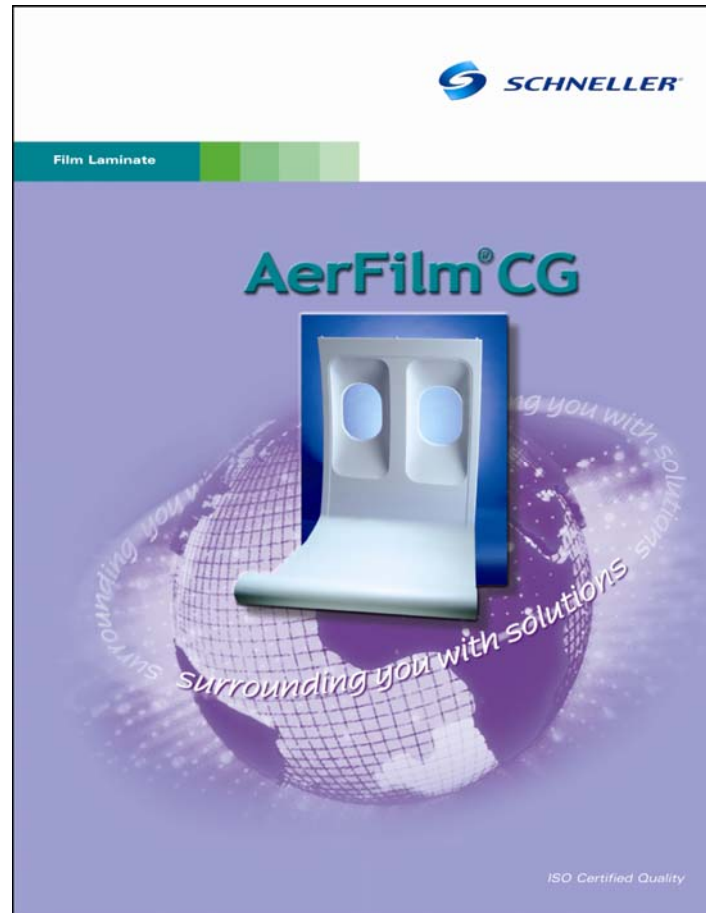

The brochure illustrates how the high yield, low cost of a continuous roll laminate can save 30% or more on material costs alone over conventional sheet products. AerFilm CG covers oversize panels with no seams, less waste, and less time and labor than sheets.

It is also engineered with improved formability to apply better to panels with complex contours, minimizing hand rework after heat vacuum application.

The overall appearance of AerFilm CG is enhanced by Schneller's unique, continuous emboss process that improves texture retention and exhibits minimal gloss increase after forming.

AerFilm CG complies with FAR25.853, qualifying it for low smoke and heat release requirements.

Schneller is a global leader in the development and production of engineered decorative laminates and non-textile flooring for the transportation and architectural industries. Schneller provides custom design and color matching, material selection, continuous roll and sheet production from its ISO-9001 certified production facilities in Kent, Ohio and Pinellas Park, Florida with global sales and service support from its Paris, France facility.

New brochure from Schneller introduces AerFilm CG Continuous Roll Laminate for geometric designs. Improves design flexibility and economy.
