**New Brochure From Schneller Introduces
AerScreen™ Multi-Purpose Screen Laminate**

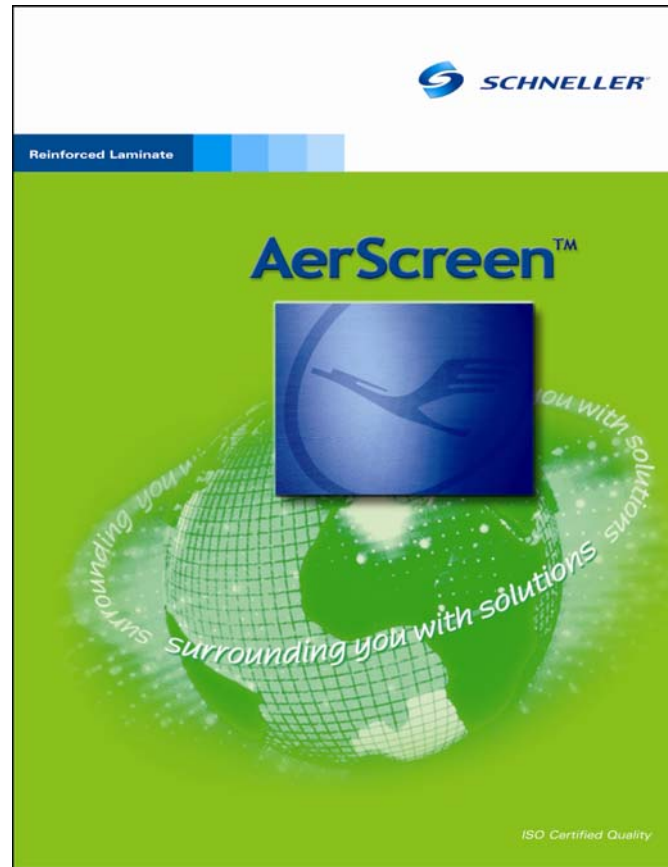

Kent, Ohio, USA – Schneller Inc., has announced the release of a new brochure that introduces an innovative retractable screen laminate that combines high performance functionality with sophisticated decorative effects.

The brochure highlights the development of AerScreen initially for Lufthansa's A340-600 wide body planes, and provides performance features and benefits and general product specifications.

AerScreen is a tough, flexible reinforced laminate that operates smoothly as a retractable screen in aircraft galley housings, is stain and abrasion resistant, can be printed, embossed and perforated for a variety of visual effects. It is also readily customizable for other interior applications, with or without perforations.

AerScreen complies with vertical burn requirements, qualifying it for use on all aircraft fleets.

Schneller is a global leader in the development and production of engineered decorative laminates and non-textile flooring for the transportation and architectural industries. Schneller provides custom design and color matching, material selection, continuous roll and sheet production from its ISO-9001 certified production facilities in Kent, Ohio and Pinellas Park, Florida with global sales and service support from its Paris, France facility.

New brochure from Schneller unveils AerScreen™, a multi-purpose, retractable screen laminate.
