**FOR IMMEDIATE RELEASE**

September 22, 2010

### **SCHNELLER ANNOUNCES NEW TECHNOLOGY FOR RAIL MARKET**

**Cologne, September 22, 2010:** Schneller customers can now find the well known benefits of Indura® decorative laminates in thermoplastic technology. The decorative cap developed by Schneller incorporates a polyvinyl fluoride (PVF) protective surface layer that is resistant to graffiti, stains and solvents. Custom designs, colors and prints and the proven regulatory compliance of Indura® products allows customers the ultimate in durable design with the benefits of a thermoplastic base.

The Indura® decorative cap product was developed to address the emerging thermoplastic market in rail. With low tooling costs, fast forming cycle times and flexible product options to ensure optimal performance, thermoplastics are positioned to have a significant impact on the rail market. Now customers can experience the ultimate in design flexibility in a material that provides excellent 3D formability for seat shrouds, wall panels and window reveals – all with recyclable materials.

Schneller coordinated the development of the Indura cap with two leading industry thermoplastic providers: Kydex LLC and Sheffield Plastics, A Bayer Material Science LLC business. Kydex is offering the Indura® capped product as part of their Kydex® 6200 Series Thermoplastics. Sheffield Plastics offers its product under the trade name Bayblend® MTR AG, developed specifically to meet the industry's latest flame, smoke and toxicity standards. Both companies have Indura capped thermoplastics under evaluation at major transit authorities.

For more information about Kydex® 6200 Series Thermoplastics, call 1800-325-3133, email [info@kydex.com](mailto:info@kydex.com) or visit Kydex online at [www.kydex.com](http://www.kydex.com).

For more information about Sheffield Plastics products, call 1-800-628-5084, or visit Sheffield Plastics online at [www.sheffieldplastics.com](http://www.sheffieldplastics.com).
